**Biba Vladimir Vasilevich**, candidate of engineering sciences, associate professor of department of economy of enterprise. **Skrylnik Andrey Sergeevich**, assistant of department of economy of enterprise. **Chmir Olexandr Victorovich**. The Poltava national technical university of the name of Yu. Kondratyuk.

**Theoretical approaches are in relation to the estimation of pre-conditions of deepening of world economic crisis.** Currently the world economy is experiencing a very difficult period. Slowdown of growth in gross domestic product in developed countries, the debt crisis of the U.S. and the EU, the increase in unemployment in the world demonstrate the need to predict the further development of the global economy to develop measures to overcome these crises. The paper analyzes the economic situation in the world in 20 years of the twentieth century. and at the beginning of the XXI century to identify conditions for a repetition of the global economic crisis of the magnitude similar to the Great Depression of 1929-1933 years.

**Keywords:** financial crisis, public debt, the Great depression, the political situation, the collapse of the market.
